Rangeline offers reduced branch outlet Line Stops from 4" through 54". This provides the customer piece of mind while insuring pipe integrity and it's the most economical solutions to their piping problems.

By using reduced branch outlet Line Stop fittings this eliminates "size on size" Line Stop taps which can create a weak point when Line Stop is in place. This could increase the chances of pipe failure during the Line Stop operation particularly when working with Asbestos Cement, Class PVC or Cast Iron Pipes.

Also, by using the reduced branch outlet Line Stop fitting it allows Rangeline to give our customers the most economical solution to their problems. Rangeline can provide superior fitting such as All Stainless Steel, Epoxy Coated and Hot Dipped Galvanized Line Stop Fittings.
